Find all generators of the cyclic group U(50).

# Fundamental Theorem of Cyclic Groups

#### Theorem 4.3

#### Fundamental Theorem of Cyclic Group

Every subgroup of a cyclic group is cyclic. Moreover, if  $|\langle a \rangle| = n$ , then the order of any subgroup of  $\langle a \rangle$  is a divisor of n; and, for each positive divisor k of n, the group  $\langle a \rangle$  has exactly one subgroup of order k-namely,  $\langle a^{n/k} \rangle$ .

Suppose  $G = \langle a \rangle$  and G has order 30. Find all the subgroups of G.

## Corollary

#### Subgroups of $\mathbb{Z}_n$

For each positive divisor k of n, the set  $\langle n/k \rangle$  is the unique subgroup of  $\mathbb{Z}_n$  of order k; moreover, these are the only subgroups of  $\mathbb{Z}_n$ .

Write the list of subgroups of  $\mathbb{Z}_{30}. \label{eq:subgroups}$ 

Find the generators of the subgroup of order 9 in  $\mathbb{Z}_{36}$ .

#### **Euler Phi Function**

Let  $\phi(1) = 1$ , and for any integer n > 1, let  $\phi(n)$  denote the number of positive integers less than n and relatively prime to n.

#### Example

Write each  $\phi(n)$  for  $n \in \{1, 2, \dots, 12\}$
